

COMPUTER HARDWARE AND GSM REPAIRS

TOPIC 1: Introduction to Computer Hardware & GSM Repairs

This trade teaches the identification, care and basic repair of computer hardware and mobile phones (GSM). Importance: high demand for repair skills, self-employment and support for digital devices. Careers: phone technician, computer technician, ICT support.

TOPIC 2: History of Computers & GSM

Computers evolved from large mainframes to personal computers and laptops. Mobile phones evolved from basic feature phones to smartphones with internet, cameras and apps. Understanding history helps appreciate current technology.

TOPIC 3: Basic Computer Hardware Components

Input devices (keyboard, mouse), output devices (monitor, printer), processing (CPU), storage (hard disk, SSD, flash drive). The system unit houses the motherboard, CPU, RAM and power supply.

TOPIC 4: Identification of GSM Components

Main parts of a phone: screen/display, keypad or touch panel, battery, SIM card slot, circuit board (motherboard), camera, speaker, charging port. Knowing parts is the first step in diagnosis and repair.

TOPIC 5: Safety Precautions in the Workshop

Handle tools carefully; switch off and unplug devices before opening; use anti-static (ESD) precautions where needed; work in a well-lit, organised space; wear eye protection when soldering; keep liquids away from devices.

TOPIC 6: Tools for Computer & GSM Repairs

Screwdrivers (precision set), pliers, tweezers, multimeter/tester, soldering iron and solder, heat gun, suction tools for screens, cleaning brushes and isopropyl alcohol. Use the correct tool for each job.

TOPIC 7: Peripheral Devices

Peripherals connect to the computer: printers, scanners, external hard drives, flash drives, speakers, webcams. Know how to connect and care for them.

TOPIC 8: Basic Care & Maintenance

Clean dust from computers and phone charging ports; charge batteries correctly (avoid extreme heat); update software when appropriate; handle devices gently; store in dry places. Preventive care reduces faults.

Summary

Computer Hardware and GSM Repairs covers identification of parts, safety, tools, peripherals and basic care. Practical skills in handling devices form the foundation for later repair work.
