

TOPIC 6: THE STUDY OF COLOURS (PART 3) – MAKING A COLOUR WHEEL

1. What is a Colour Wheel?

A colour wheel is a circular diagram that shows the relationships between primary, secondary and tertiary colours. It is a practical tool for learning colour mixing and harmony.

2. How to Make a Simple Colour Wheel (Practical)

1. Draw a circle and divide it into 12 equal segments (like a clock).
2. Place the three primary colours at equal intervals (e.g. red at 12, yellow at 4, blue at 8).
3. Mix and place secondary colours between the primaries (orange between red and yellow, green between yellow and blue, purple between blue and red).
4. Mix and place tertiary colours between each primary and secondary.
5. Label each segment. Keep the wheel for reference when painting or designing.

3. Using the Colour Wheel

- Complementary colours are opposite each other (e.g. red and green) and create strong contrast.
- Analogous colours are next to each other and create harmony.
- The wheel helps you choose colours that work well together.

4. Summary

Making a colour wheel is a practical way to understand colour relationships. Use it to plan harmonious and contrasting colour schemes in your art.
