

TOPIC 5: INTERNET AND WEB SERVICES

1. Browsers and Search Engines

A **web browser** (e.g. Chrome, Firefox, Edge) is software used to access and display websites. A **search engine** (e.g. Google, Bing) helps you find information on the web by typing keywords. Use clear keywords and check the reliability of sources.

2. Email

Email allows you to send and receive electronic messages. You need an email address and access via a browser or an email app. Steps typically include: create an account, compose a message (To, Subject, body), attach files if needed, and send. Check the inbox regularly and manage spam.

3. Email Etiquette

- Use a clear subject line.
- Be polite and use correct language.
- Do not write in only capital letters (it seems like shouting).
- Check spelling before sending.
- Do not open attachments from unknown senders.
- Respect privacy; do not forward private messages without permission.

4. Summary

Browsers and search engines help you use the web; email is a key communication tool. Good etiquette and safety habits make online communication effective and secure.
