

JSS 2 INTERMEDIATE SCIENCE – FIRST TERM

TOPIC 1: REVIEW OF JSS 1 SCIENCE CONCEPTS

1. Matter

Matter is anything that has mass and occupies space. It exists in three main states: solid, liquid and gas. Matter is made up of particles (atoms and molecules). Changes can be physical (reversible, no new substance) or chemical (new substance formed).

2. Energy

Energy is the ability to do work. Forms include kinetic, potential, heat, light, sound, electrical and chemical energy. Energy can be converted from one form to another but is not created or destroyed (conservation of energy).

3. Environment

The environment is everything that surrounds a living organism – living (biotic) and non-living (abiotic) things. Humans depend on and affect the environment.

4. Laboratory Rules and Safety

Follow instructions; wear protective clothing when needed; do not taste or smell chemicals carelessly; report accidents; keep the lab clean; know the location of safety equipment (fire extinguisher, first-aid box).

5. Observation and Measurement

Science relies on careful observation and accurate measurement (length, mass, time, temperature, volume) using appropriate instruments and units.

6. Summary

Revision of matter, energy, environment, lab safety and measurement prepares you for deeper study of environmental science in JSS 2.
