

TOPIC 7: CONSERVATION OF NATURAL RESOURCES

1. Meaning and Types of Natural Resources

Natural resources are materials from nature that humans use. Examples: water, air, soil, forests, minerals, oil, wildlife. They may be **renewable** (can be replaced in a reasonable time – forests, water, solar) or **non-renewable** (exist in limited amounts – oil, coal, many minerals).

2. Importance of Conservation

Conservation means wise use and protection of resources so that they last for present and future generations. It prevents scarcity, protects ecosystems and supports sustainable development.

3. Role of Individuals

- Use water and electricity carefully
- Avoid littering and support recycling
- Plant and protect trees
- Do not hunt endangered animals or destroy habitats
- Support policies and education for conservation

4. Summary

Natural resources are renewable or non-renewable. Conserving them through careful use and protection is everyone's responsibility.
