

TOPIC 4: FRACTIONS – TRANSACTIONS IN HOMES AND OFFICES

1. Expressing Fractions as Ratios, Decimals and Percentages

Fraction → Decimal: divide numerator by denominator (e.g. $\frac{3}{4} = 0.75$).

Fraction → Percentage: multiply by 100 (e.g. $\frac{3}{4} = 75\%$).

Fraction → Ratio: write as a:b (e.g. $\frac{3}{4}$ means 3:4).

Decimal → Percentage: multiply by 100 ($0.4 = 40\%$).

2. Application in Daily Transactions

- Discounts and sales (e.g. 20% off)
- Sharing money or items in a given ratio
- Interest and simple percentages in shops and offices
- Mixing ingredients or solutions

3. Quantitative Reasoning

Practise converting between forms and solving word problems involving fractions, ratios and percentages in real-life contexts (shopping, sharing, measuring).

4. Summary

Fractions, decimals, percentages and ratios are different ways of expressing parts of a whole. Being able to convert between them is essential for everyday calculations in homes and offices.
