

### TOPIC 2: APPROPRIATE POSTURE IN SITTING, STANDING, WALKING AND LIFTING

#### 1. Sitting Posture

Sit with back straight and supported, feet flat on the floor, knees at about 90°, shoulders relaxed, and screen or book at eye level. Avoid slouching or crossing legs for long periods.

#### 2. Standing Posture

Stand tall with weight evenly on both feet, knees slightly soft (not locked), shoulders back and relaxed, head level and chin slightly tucked. Avoid leaning to one side.

#### 3. Walking Posture

Walk with head up, eyes forward, shoulders relaxed, arms swinging naturally, and steps smooth. Avoid looking down at the phone for long periods while walking.

#### 4. Lifting Posture

Bend at the knees and hips (not the waist), keep the back straight, hold the load close to the body, lift with the legs, and avoid twisting while lifting. Put the load down the same way.

#### 5. Practical Tips

Take short breaks when sitting for long; stretch; choose supportive chairs and shoes; practise good posture until it becomes a habit.

#### 6. Summary

Correct posture in sitting, standing, walking and lifting protects the spine and reduces injury risk. Conscious practice builds lasting healthy habits.
