

JSS 2 TRADE SUBJECT – FIRST TERM

FASHION DESIGN AND GARMENT MAKING

1. Review and Foundation

Fashion design is the art of creating clothing and accessories. Garment making turns designs into finished clothes using patterns, cutting and sewing. Tools include measuring tape, scissors, pins, needles, sewing machine, and pressing equipment. Safety: careful use of scissors and machines; good posture and lighting.

2. Body Measurements and Pattern Basics

Accurate measurements (bust, waist, hip, length, etc.) are essential. Basic pattern blocks can be adapted for different styles. Understanding ease (extra room for movement) improves fit.

3. Fabrics and Choice

Natural fibres (cotton, linen, wool, silk) and synthetic fibres (polyester, nylon) have different properties. Choose fabric to suit the design, climate and care requirements. Identify right and wrong sides, grain and stretch.

4. Sewing Techniques (Progression)

Seams, hems, facings, simple fastenings (zip, buttons). Practice straight stitching, neat finishing and pressing. Machine care and correct thread tension matter for quality.

5. Simple Garment Construction

Follow a sequence: prepare fabric → cut from pattern → mark → sew seams → fit and adjust → finish edges and hems → press. Start with simple items (skirt, blouse, shorts) before complex designs.

6. Design and Entrepreneurship

Sketch ideas; consider colour, style and customer needs. Cost materials and time; price fairly. Neat presentation and good customer relations support a small fashion business.

Summary

JSS 2 Fashion builds measurement, fabric, sewing and simple construction skills, with an introduction to design and small-scale business practice.
