

JSS 2 TRADE SUBJECT – FIRST TERM

LIVESTOCK FARMING

1. Review of Livestock Basics

Livestock farming is the rearing of animals (poultry, goats, sheep, cattle, pigs, rabbits) for meat, eggs, milk, hides and income. Good housing, feeding, health care and record-keeping are essential.

2. Housing and Equipment

Housing should protect from weather and predators, allow ventilation and easy cleaning. Equipment includes feeders, drinkers, bedding and simple handling tools. Design depends on the type and number of animals.

3. Feeds and Feeding

Animals need balanced diets (energy, protein, minerals, vitamins and water). Use appropriate commercial feeds or formulated farm mixes. Avoid sudden feed changes; provide clean water always.

4. Health and Disease Prevention

Vaccination, deworming, clean housing and quarantine of new animals reduce disease. Recognise common signs of ill health (loss of appetite, diarrhoea, coughing) and seek veterinary help when needed. Biosecurity limits the spread of disease.

5. Management Practices

Daily observation, regular cleaning, proper stocking density, and records of births, deaths, feed and sales support successful farming. Handling animals calmly reduces stress and injury.

6. Entrepreneurship

Plan scale of production, cost feed and medicine, and identify markets (eggs, meat, live animals). Quality products and reliable supply build customer trust.

Summary

JSS 2 Livestock Farming deepens knowledge of housing, feeding, health and management, with attention to practical care and small-business thinking.
