

Week 10: Review of Environmental Concepts

JSS3 Intermediate Science — First Term Lesson Note (Deep-Dive Edition)

Introduction

This final topic of the term brings together everything studied this term, reviewing the major environmental concepts covered from Week 2 through Week 9.

Summary of Major Environmental Topics

Week	Topic	Key Idea
2	Ecosystem	Living things interact with each other and their environment through food chains and food webs
3	Natural Resources	Resources are renewable or non-renewable, and must be conserved for the future
4	Environmental Hazards	Drought, desertification, erosion, and flooding threaten communities, but can be prevented and prepared for
7	Environmental Health	A clean environment protects human health; individuals, government, and health officers all play a role
8	Waste Disposal and Recycling	Proper waste management and recycling protect health and the environment
9	Sustainable Development	Development must balance present needs with the wellbeing of future generations

How These Topics Connect

These topics are closely linked: poor waste management (Week 8) can harm environmental health (Week 7) and disrupt ecosystems (Week 2); unsustainable use of natural resources (Week 3) can contribute to environmental hazards like desertification (Week 4); and sustainable development (Week 9) provides the overall framework for addressing all of these challenges responsibly.

Quiz and Group Presentation

As a revision activity, students will be divided into groups, each assigned one topic from this term to summarize and present to the class, followed by a short class quiz covering all topics studied this term.

Real-Life Application

Understanding how these environmental concepts connect helps students see environmental challenges as a whole system — for example, recognizing that better waste management in a community can simultaneously improve environmental health, protect local ecosystems, and support sustainable development goals.

Vocabulary Recap

Word	Meaning
Ecosystem	A community of organisms interacting with their environment
Conservation	The careful protection and management of resources
Sustainable development	Development that meets present needs without harming the future

Evaluation Questions

- 1 List the six major environmental topics studied this term, in order.
- 2 Explain the connection between waste management and environmental health.
- 3 Explain the connection between natural resource use and environmental hazards.
- 4 What is the overall framework that ties all this term's topics together?
- 5 Give one example of a food chain from Week 2.
- 6 Name two environmental hazards discussed in Week 4.
- 7 What is the role of an Environmental Health Officer, from Week 7?
- 8 Name two SDGs related to the environment, from Week 9.
- 9 Choose one topic from this term and summarize it in three sentences.
- 10 In your own words, explain why studying environmental science as connected topics, rather than isolated facts, is valuable.

(Weeks 11–13 are Revision, Examination, and Closing/Vacation — no new content in these weeks.)
