

TOPIC 5: EXHIBITION AND DISPLAY TECHNIQUES

1. Preparing Artworks

Finish works neatly; mount or frame where appropriate; label with title, artist's name and medium. Clean and protect pieces from damage before display.

2. Display Techniques

Arrange works so they can be seen clearly. Use walls, tables, screens or stands. Group related works; leave space between pieces so each can be appreciated. Consider height (eye level for main works).

3. Categorising; Space, Screens and Lighting

Categorise by theme, medium or class. Use screens to create sections in a large room. Lighting should be adequate and avoid strong glare or heat that damages work. Good layout guides the viewer's path through the exhibition.

4. Summary

Successful exhibition depends on careful preparation, clear layout, categorisation and suitable lighting so that artworks are shown at their best.
