

TOPIC 7: CONSTRUCTION AND DESIGN (PACKAGE DESIGN)

1. Meaning of Package Design

Package design is the creation of the container and surface design for a product. It protects the product, identifies the brand and attracts the buyer.

2. Functions of Package Design

- Protect the product during storage and transport
- Inform (name, contents, instructions)
- Attract attention and communicate brand identity
- Make handling and display convenient

3. Processes in Package Design

Research the product and audience → sketch concepts → choose colours, typography and motifs → construct or mock up the package (e.g. net for a box) → refine and present. Consider materials, cost and environmental impact where possible.

4. Summary

Package design combines function and visual appeal. Clear process and understanding of audience lead to effective packaging.
